

Modern Hydraulics/Nevada LLC

The *new* leader in jacking equipment for structural movers

Even though we're a new company, we're not new at this business. Back in 1958 my father, Robin Renshaw, started Modern Hydraulics, Inc. to design, manufacture and service the very first Unified™ jacking systems and crib jacks. The product line soon expanded to include many types of specialty equipment, including many different sizes of dollies and power packs, some very large and very special Unified™ jacking systems, including the largest unified™ jacking system ever made, a 120 jack unified jacking machine, and specialized equipment for the auto, tank car, and pipeline industries. This equipment quickly gained a reputation of quality in design and construction, and sales were made as far away as Australia and New Zealand.

At the end of 2005 Robin retired and closed Modern Hydraulics, Inc. A new company, Modern Hydraulics/Nevada LLC, was formed to continue the tradition of excellence in the design, manufacturing, service and support of equipment for the structural moving industry.

Modern Hydraulics/Nevada L.L.C. will provide parts, service and support for existing Modern Hydraulics, Inc.-built equipment, as well as designing, manufacturing, selling and servicing its own line of equipment for the structural moving and automotive industries.

What's the "Nevada" in our name for? That's where I hope to move to sometime. After several visits to the Silver State, I've fallen in love with the area roughly 50 miles south of Reno, near Carson City. I participate in several organized off-road motorcycle rides held in Nevada and California each year.

Over the past five years we've invested hundreds of thousands of dollars in new equipment and technology to be able to keep up with greatly increased volume of orders that we have received while maintaining the level of quality that our customers expect. With our new CNC lathes and mill we have reduced the time required to machine some parts from 30 minutes down to just 3-1/2 minutes with far better accuracy than our old manual machines. We manufacture virtually machine piece in every one of our machines ourselves, saving you time and money.

Modern Hydraulics/Nevada LLC will be bringing to market more new and innovative equipment for the structural mover while preserving the reputation for quality enjoyed for over fifty years by Modern Hydraulics, Inc. Our customers will benefit from our investments in better and faster equipment while also gaining an edge from our expertise in applying modern technology to the equipment used in the structural moving industry. That sounds like a recipe for success for all of us!

We look forward to doing business with all of the existing customers of Modern Hydraulics, Inc., as well as making new customers for Modern Hydraulics/Nevada LLC, and we thank all of you for your support.

Lance Renshaw, President/Owner
